# Yong Zhuang

Contact Information	yong.zhuang001@umb.edu https://yong-zhuang.github.io/	617-763-8919
RESEARCH INTERESTS	Artificial Intelligence, Machine Learning, Big Data Analysis, F Data, Spatio-temporal Data Analysis, Time Series Prediction	eature Selection on Big
EDUCATION University of Massachusetts, Boston, MA		
	Ph.D., Computer Science, GPA: 3.906	Sep. 2016 - Dec. 2021
	M.S., Computer Science, GPA: 3.923	Sep. 2014 - May 2016
	Harbin Engineering University, Harbin, China	
	B.E., Computer Science, GPA: 3.68	Sep. 2001 - June 2005

## HIGHLIGHTED EXPERIENCE

## **Professional Services**

- National Science Foundation(NSF) panel (2022).
- Program Committee Member in KDD, SDM, AAAI, CIKM.

## Teaching Experience

- 4 semester as the instructor to counsel disadvantaged students to succeed in their compulsory courses such as Theory of Computation, Data Structures and Algorithms.
- 5 semesters as the teaching assistant in AI, Big Data Analysis, and Introduction to Computing
- 1 online tutoring material on time series forecasting

## **Industry Experience**

- 5 years full-time working experience
- 2 semesters NSF Graduate Research Internship during Ph.D. study

## Award

- Oracle Doctoral Research Fellowship in fall 2016, fall 2018
- The Randall Gates Malbone Fellowship in May. 2019

## SELECTED RESEARCH EXPERIENCES

#### Feature Selection on Big Spatio-temporal Data

Given a large-scale Spatio-temporal database, effectively and efficiently identifying strongly related features and removing the irrelevant or less important features with respect to a target variable is a critical and challenging issue in many fields. In this work, I collaborated with scientists in climate science and water diplomacy at Tufts University to design a multi-Markov-blankets-based ensemble model "Galaxy" to identify precursors to heavy precipitation event clusters. "Galaxy" identified the cold surges along the coast of Asia as an essential precursor to the surface weather over the United States, which was confirmed by climate experts.

## Deep Learning on Big Spatio-temporal Data

As the number, volume, and resolution of spatio-temporal datasets increase rapidly, Spatio-temporal dependencies of features become highly complex and hard to capture. With its strong hierarchical feature learning capabilities in both the spatial and temporal domains, deep learning has emerged as a promising method to address this challenge. In this study, I collaborated with scientists in the School of Criminology and Justice Studies at UMASS Lowell to integrate Convolutional Neural Networks and Recurrent Neural Networks to capture latent spatio-temporal features for predicting crime hotspots, resulting in a 21% improvement in F1-score.

## Predicting the Long-Term Behavior of Chaotic Systems

Chaotic behavior is present in many nonlinear dynamical systems, including climate dynamics, weather prediction, and the Spatio-temporal dynamics of virus spread. To provide a reliable solution for these systems, it is necessary to handle their complex Spatio-temporal dynamics and their sensitive dependence on initial conditions. In this study, I collaborated with a research team at Tufts University to propose the Lyapunov Horizon loss, which measures how the error divergence of a forecasting sequence evolves in a chaotic system. We optimized this loss function using a new approach called "Horizon Forcing" on a recurrent "tower" architecture known as "Error Trajectory Tracing." This approach improves the predictive range of sequences in chaotic systems by over 20%.

## TEACHING EXPERIENCE

## Instructor

CS Seminar

Fall 2017, Spring, Summer, and Fall 2018

- Deliver a 60-minute presentation weekly, covering the materials in the computer science courses: Intermediate Computing with Data Structures (CS210), Advanced Data Structures and Algorithms (CS310), and Introduction to the Theory of Computation (CS420).
- Provide practical guidance and answer specific questions.
- Previewing upcoming course content, assignments and predicting future challenges.

#### Mentor

CS187: Science Gateway Seminar

Spring 2017

- Design a semester-long in-class project to expose undergraduate students to research methods.
- Closely advised students on this project, after which they presented their research posters at UMASS Boston's symposium.

## Teaching Assistant

CS110: Introduction to Computing

Fall 2021

CS670: Artificial intelligence

Fall 2017, Spring 2019

CS697: Big data analysis

Fall 2016, Spring 2018

- Design semester-long in-class projects.
- Closely advised students on these projects.
- Grade students' homework and projects.
- Provide several lectures for each course.
- Hold Q&A sessions through office hours twice a week

## GRANT WRITING EXPERIENCE

Grant Writing Have experience writing two federal agency grants projects with my advisor,

Total Amount: \$355,581

- Project 1 is about physics-guided deep model for flooding forecasting.
- Project 2 is about symbolic expression exploring using deep learning.

## Industry Experience

### Senior Machine Learning Engineer

August. 2022 - Mar. 2023

Waltham, MA

Constant Contact

Estimate customer lifetime value to help the marketing team develop marketing strategies.

- Conduct RFM analysis on eCommerce data to estimate future purchases and average purchase value of customers.
- Estimate customer lifetime value using a Gamma-Gamma model on RFM analysis result.
- Segment customers using CLV to tailor accurate marketing strategies.

### **National Science Foundation Intern**

Jun. 2019 - Nov. 2019

Radial Analytics

Concord, MA

Design a machine learning system to help hospital systems and physician networks provide patients with more effective care to meet their individual needs.

- Developed a machine learning pipeline that selects the most valuable features related to patients' health status using natural language processing (NLP) and causal-based feature selection.
- Built deep neural networks to identify patient candidates in different health levels with an average precision improvement of 17%.
- Determine the best predictive model for the given problem using feature selection and model selection.

## Lead Software Engineer

Sep. 2005 - Mar. 2013

Anshan, China

Liaoning Triexcel Co., Ltd.

- Led both front-focused and backend-focused teams to develop a GIS-based Geological Hazard Management System (GHMS) for data collection, data synchronism, risk scoring, and investigation planning.
- Led both front-focused and backend-focused teams to develop an after-sales service management platform that streamlined the after-sale service process, improving efficiency and customer satisfaction.
- Spearheaded the development of a secure remote solution that enabled web-based remote control and system updates for Bank of Anshan terminals.

## UNIVERSITY SERVICES

## The College of Science and Mathematics(CSM) Faculty Senate

Assistant

UMASS Boston, Fall 2016

• Design a web application for CSM faculties to manage meeting agendas and minutes, proposals, and documents.

# AI Association

Co-organizer

UMASS Boston, Fall 2019

- $\bullet$  Hold talks, seminars, workshops, and fun activities in AI.
- Web page: https://ai-umb.github.io/

## **Tech-writing Seminar**

Organizer

UMASS Boston, Fall 2021

- A seminar where students share good sentences from essays or articles, practice, and improve scientific writing skills.
- Web page: https://yong-zhuang.github.io/tech-writing

#### ACTIVITIES

## Microsoft's AI for Earth Summit

Member Redmond, WA, Oct 2016

# The Eighth Annual "Science Engineering Technology in the CITY"

instructor

Boston, MA, Apr 2016

• Give two demonstrations, "Image Printing" (a program that allows computers to copy paintings) and "Style Transfer" (a program that can convert photos into paintings)

## Tech Savvy

Core Member & Instructor

Boston, MA, Jun 2016, 2017

- Worked with Boston University, Harvard, MIT, etc. to organize a one-week Tech-Savvy camp to prompt STEM education among Boston intermediate school students.
- Organized interactive games and lectures to stimulate interest in machine learning among high school girls.

- TECHNICAL SKILLS Language: Python, Java, ASP.NET, C#, MATLAB, PHP, JavaScript
  - Machine Learning Libraries:, Tensorflow, Keras, Pytorch, Matplotlib, Pandas, Numpy, scikit-learn, seaborn
  - Database: Oracle, Access, Microsoft SQL Server, MySQL
  - ArcGIS: Map, Server, SDE and Desktop
  - Developer tools: Git, Docker, VS Code, Visual Studio, Eclipse
  - Advanced skills Design Patterns, MVC, Jquery, AJAX

#### AWARDS

#### Honors and Awards

- Oracle Doctoral Research Fellowship Award from the Collage of Science and Mathematics at UMass Boston, Jun. 2016, 2018
- The Randall Gates Malbone Fellowship in Mathematics and Computer Science, May
- National Science Foundation (NSF) Graduate Research Internship Program, Jun.
- Microsoft's AI for Earth summit Travel Grant, Redmond, WA, Sep., 2018
- Climate Informatics Workshop Travel Grant, Boulder, Colorado, Aug. 2016
